```
export default class CustomerList extends Component {

  deleteCustomer(id) {
    let custs = this.state.customers.filter(c => c.id !== id);
    // this.state.customers = custs; // state changes, but view won't refresh

    // Async function updates the state and triggers re-rendering of view
    this.setState({
      "customers": custs
    });
    //console.log(this.state.customers); // still show old data
  }

  render() {
    return (
      <div>
        <h1>CustomerList</h1>
        <Filter />
        {
            this.state.customers.map(cust => <CustomerRow
                customer={cust}
                delEvt={this.deleteCustomer.bind(this)}/>)
        }
      </div>
    )
  }
```

Props

```
export default function CustomerRow({customer, delEvt}) {
//   let {id, firstName, lastName} = props.customer;
// props.delEvt
    let {id, firstName, lastName} = customer;
  return (
    <div>
        {firstName}, {lastName}    
        <button type='button'
          onClick={() => delEvt(id)}>
            Delete
        </button>
    </div>
  )
}
```

```
export default class CustomerList extends Component {
                4
  deleteCustomer(id) {
    let custs = this.state.customers.filter(c => c.id !== id);
    // this.state.customers = custs; // state changes, but view won't refresh

    // Async function updates the state and triggers re-rendering of view
    this.setState({
      "customers": custs
    });
    //console.log(this.state.customers); // still show old data
  }
